MEGAN STEELE | ASTRO-LITE APP DESIGN

# astro-lite

## WHAT IT IS

Astro-lite is a beginner constellation app, designed for simple use and easy information. It is for anyone interested in the night sky. It allows users to gain knowledge on all of the constellations, find constellations in the sky above them, and learn about their zodiac sign.

## LEARN

The learn button takes users to a page where the 88 constellations in the sky are visible. The users can then click on a constellation to learn about its name, symbolism, hemisphere, the seasons in which it's most visible, and a small bit of history.

## WORLD VIEW

The world view button takes users to a page where they are able to view the constellations in a world based upon the different hemispheres.

## SKY VIEW

The sky view button takes users to a page where they are prompted to answer questions in order to give a better idea of how to detect constellations in the sky. When the detector finds a constellation, the user can choose to click on it to find more information. There is also the option to save a photo to the phone.

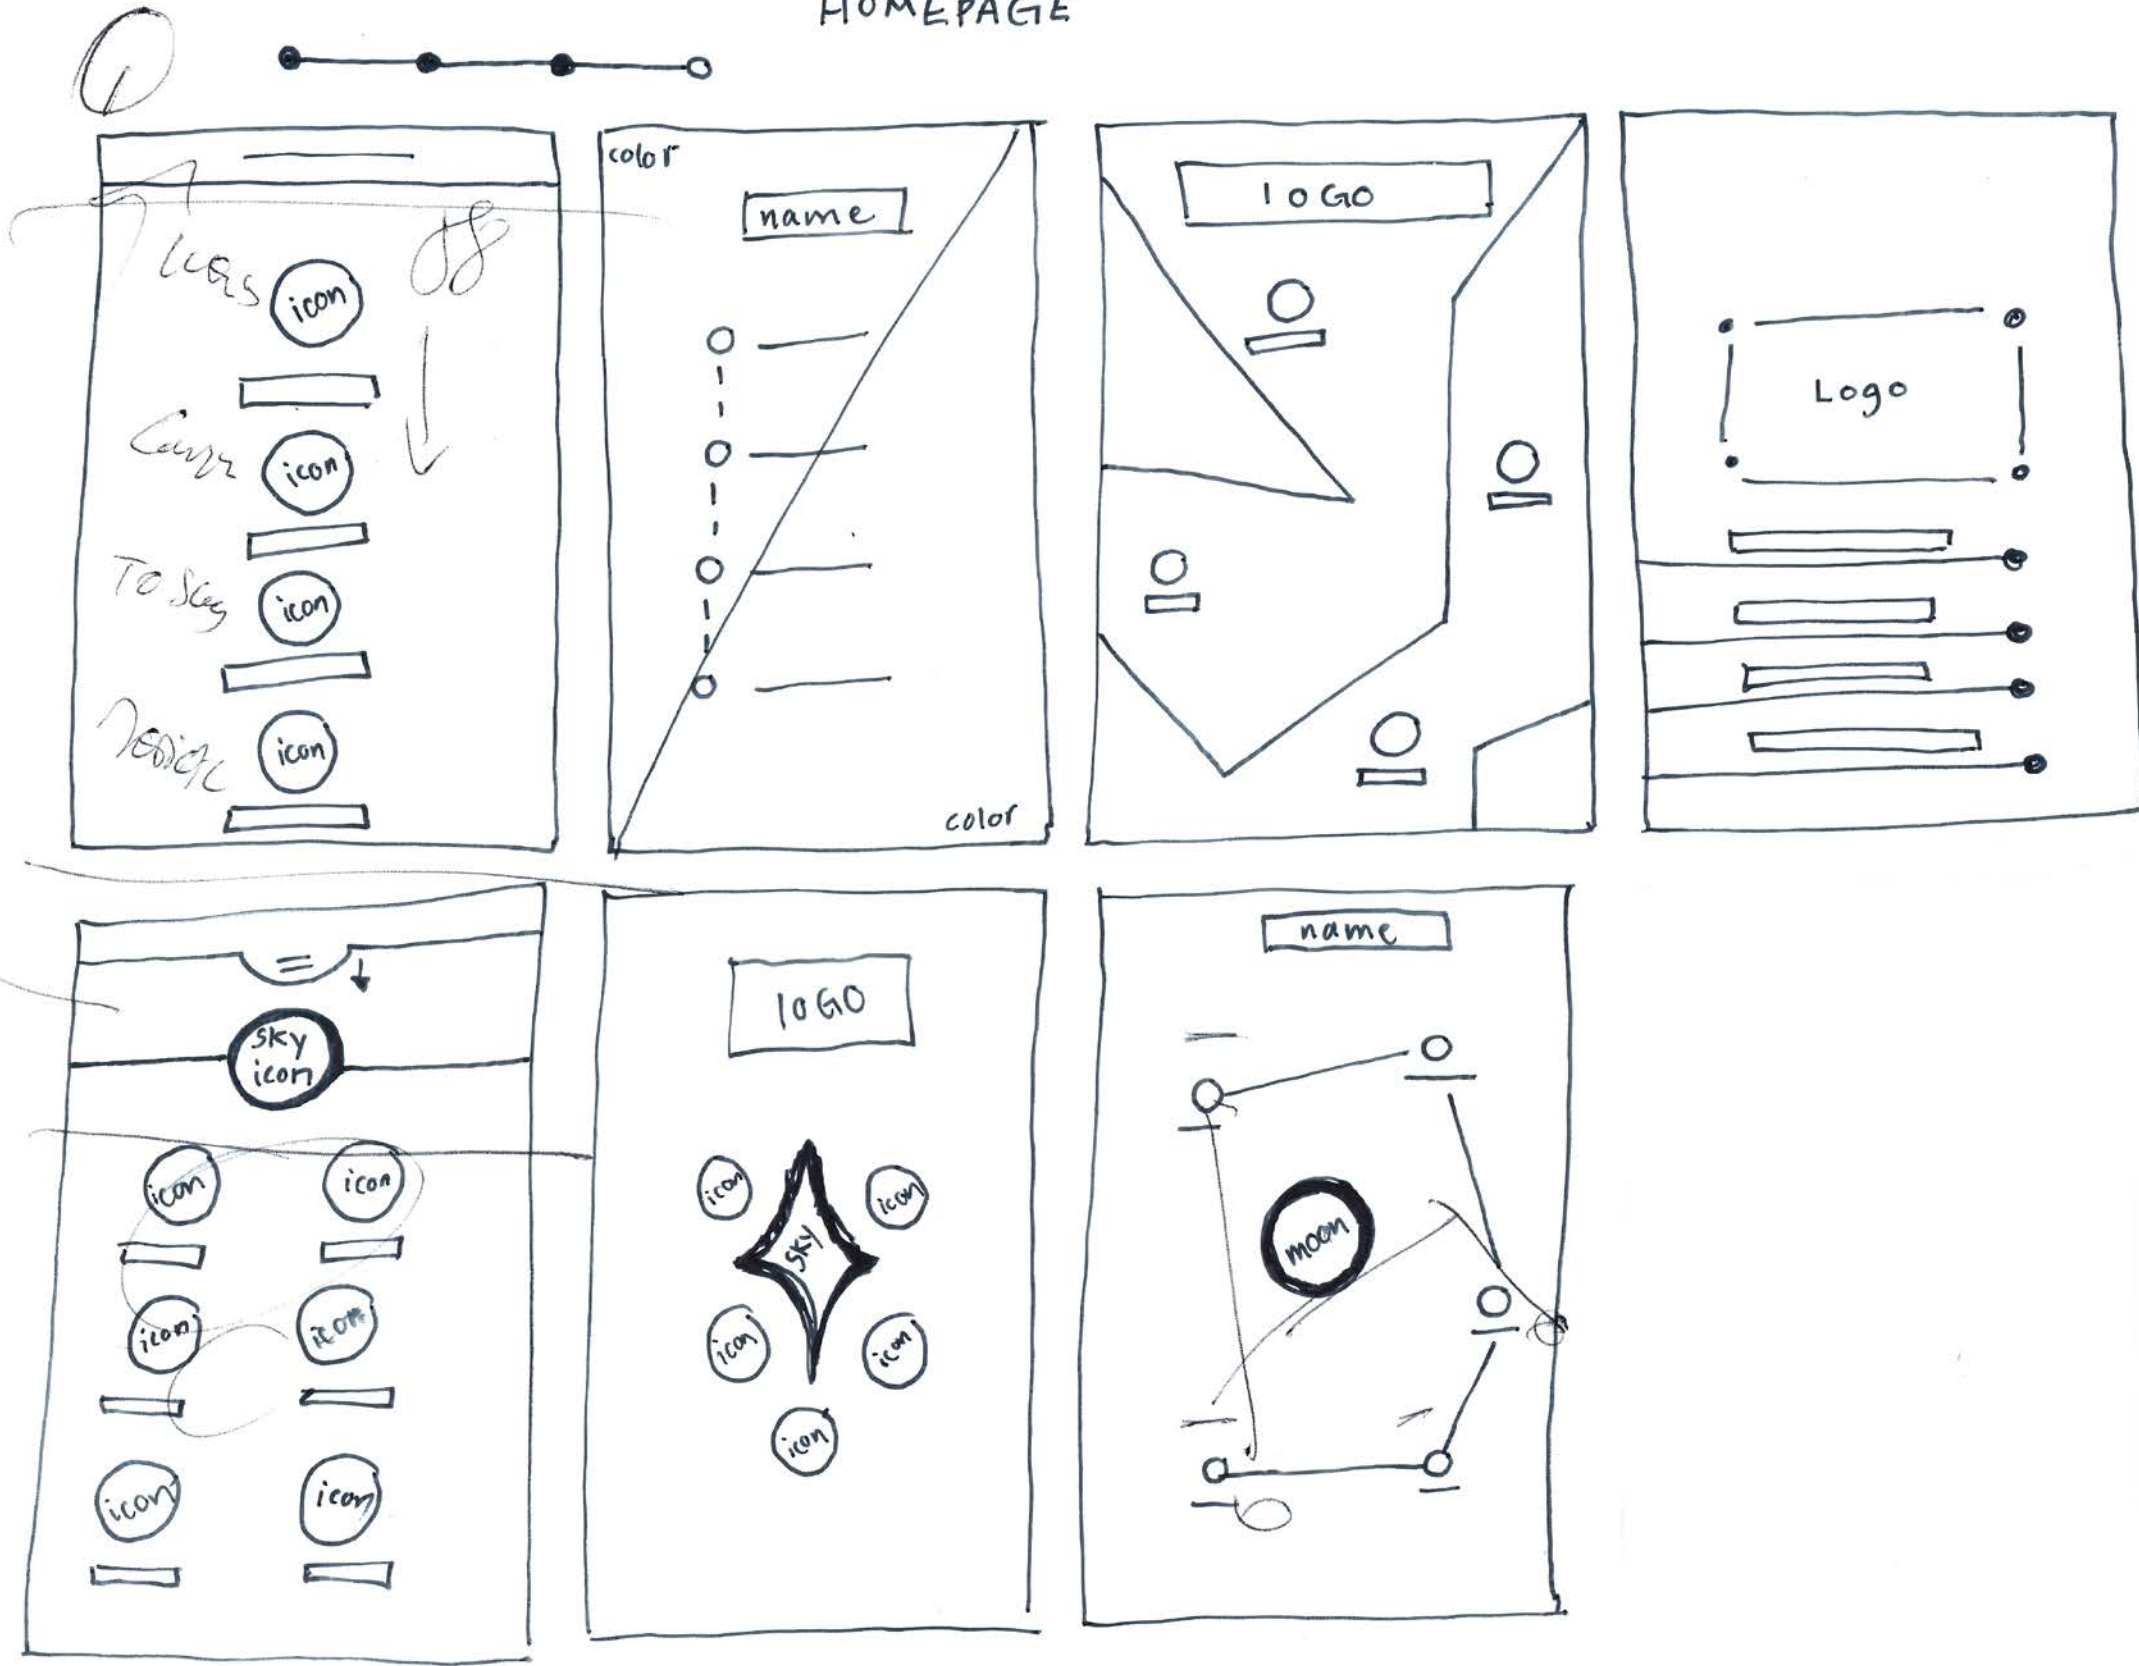

## ZODIAC

The zodiac button takes users to a page where they are able to choose a zodiac sign to learn a bit about the history and constellation. It shows the specific dates, day, color, element, compatibility, strengths, and weaknesses of each zodiac.

LOADING SCREEN

HOME PAGE

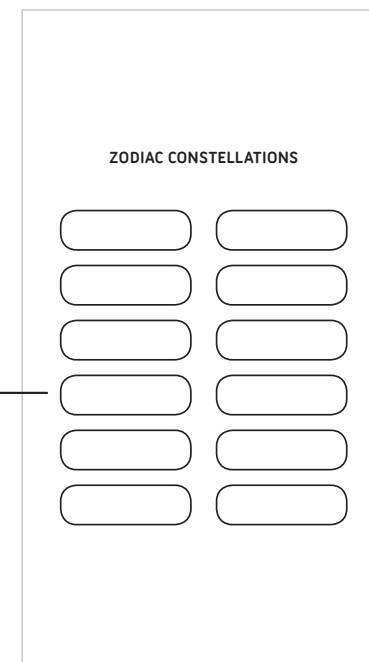

LEARN PAGE

LEARN PAGE / SPECIFIC CONSTELLATION

Learn about the name and specifics of each constellation, along with the image and key.

ZODIAC PAGE

This page allows users to find their zodiac and learn the constellations associated with it.

Upon clicking, three icons will appear for the user to choose, dusk/dawn, night and day.

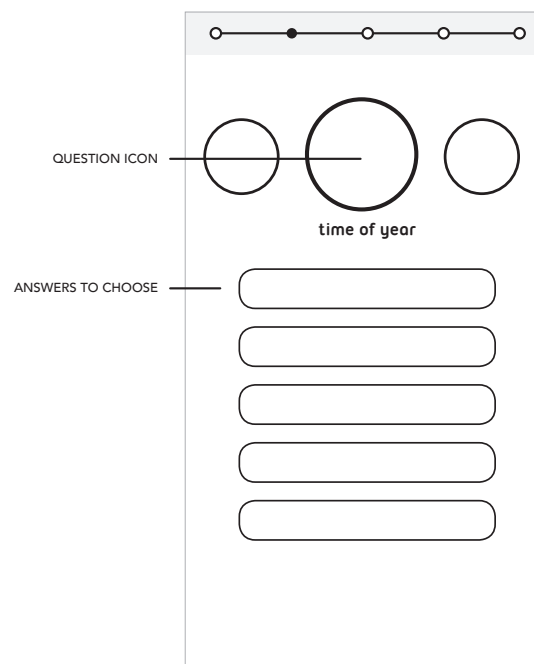

WORLD VIEW

TO SKY PAGE

This section allows the user to point their phone to the sky to detect constellations after a series of questions.

TO SKY PAGE / QUESTIONS

TO SKY PAGE / SKY POINTER

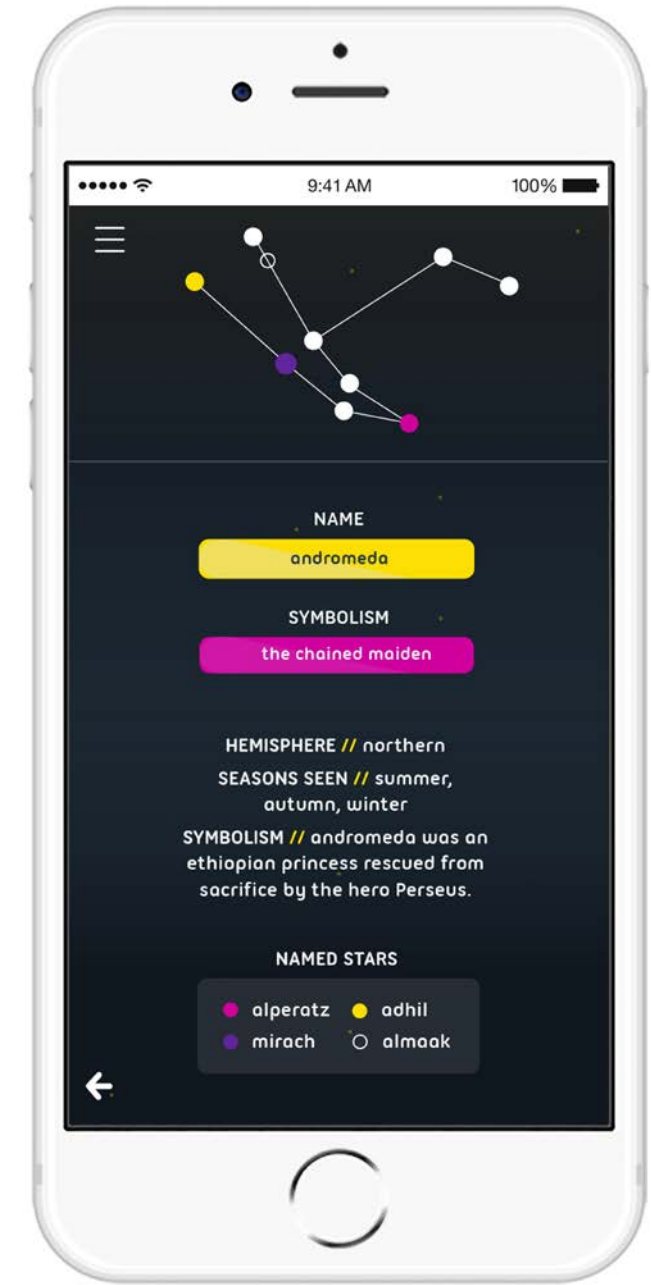

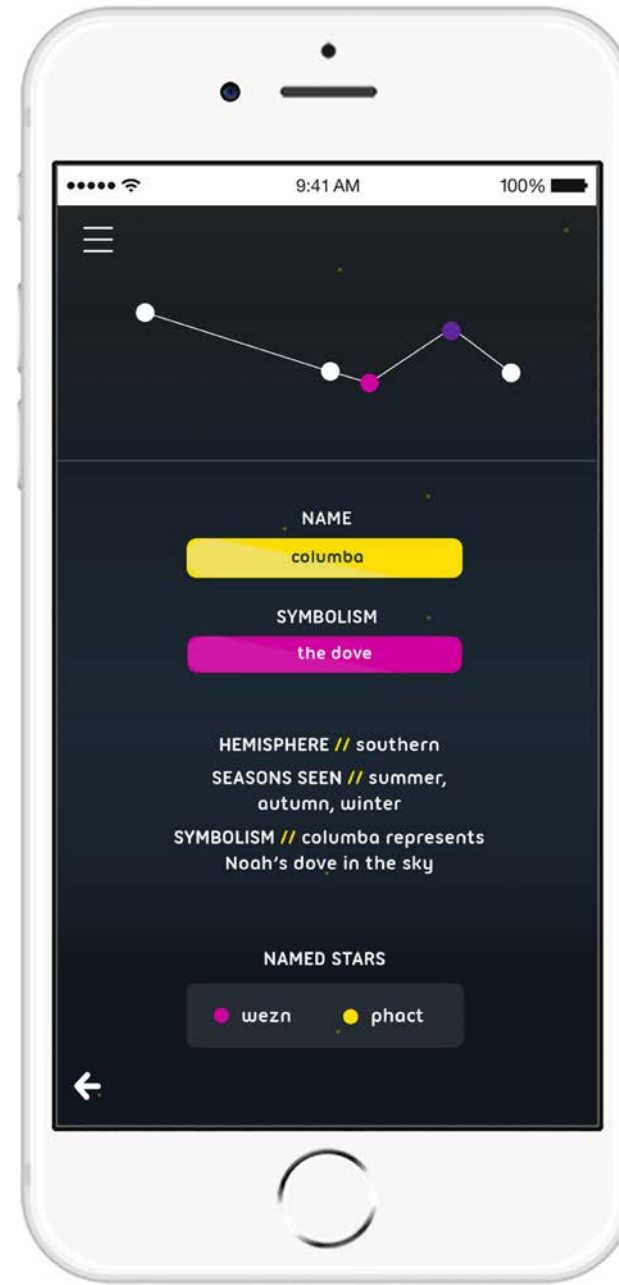

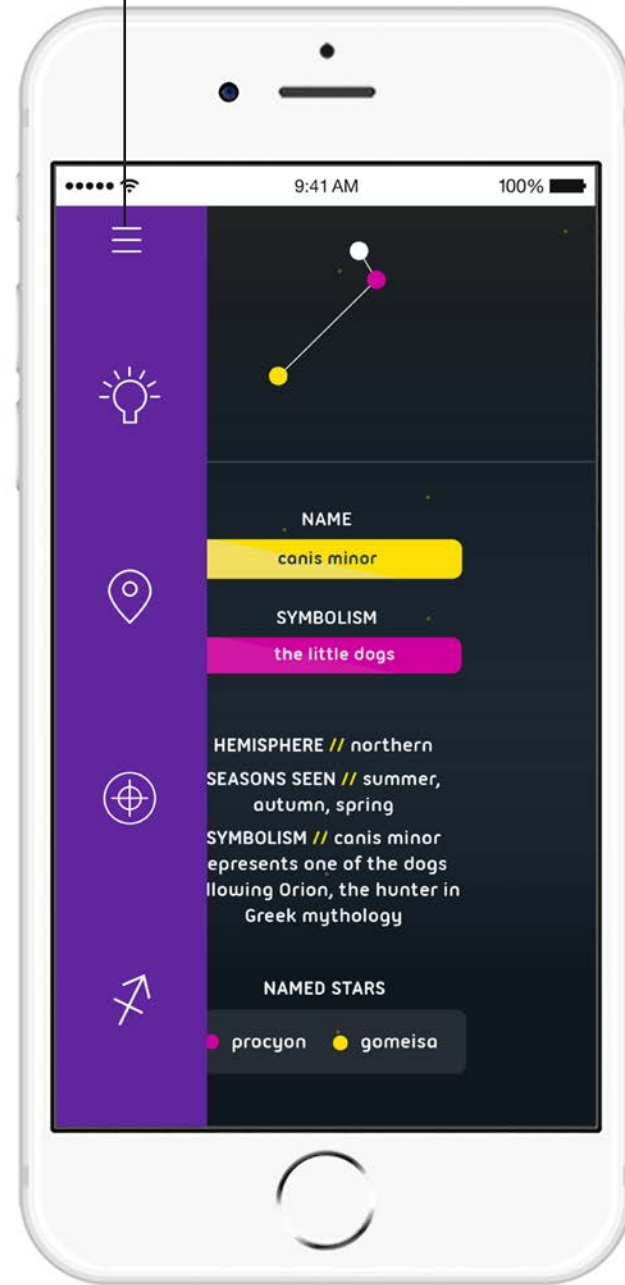

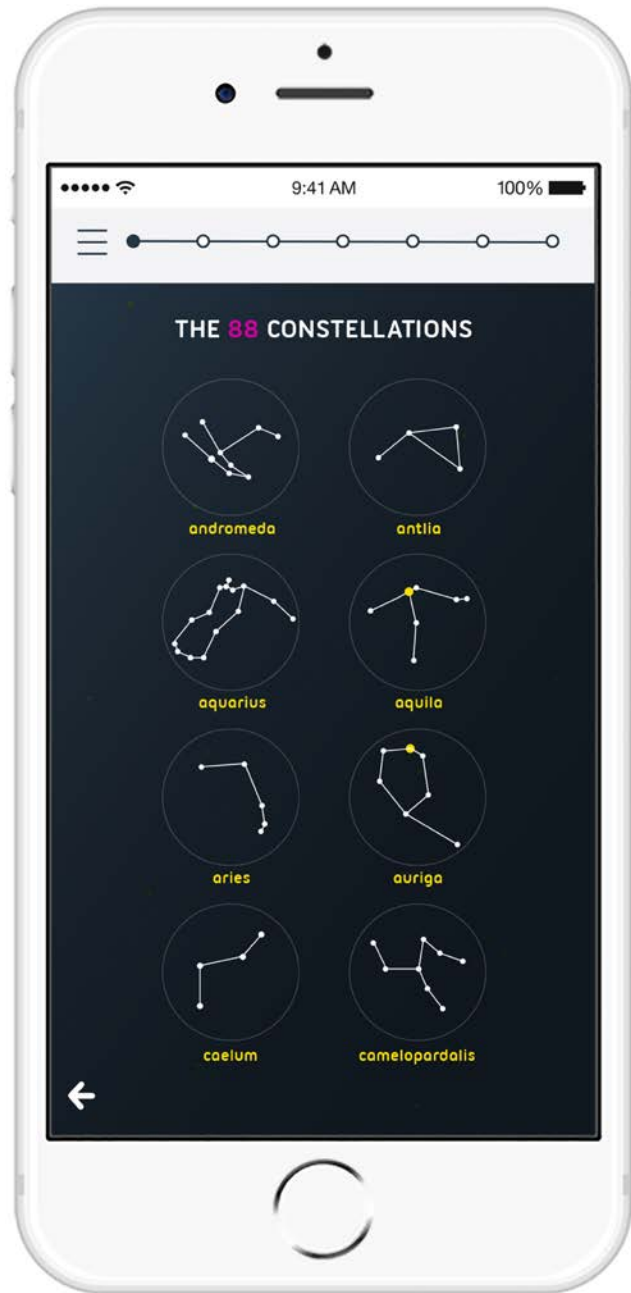

ZODIAC SPECIFIC PAGE

This gives the user a sense of what the main constellations represent in a less overwhelming manner.

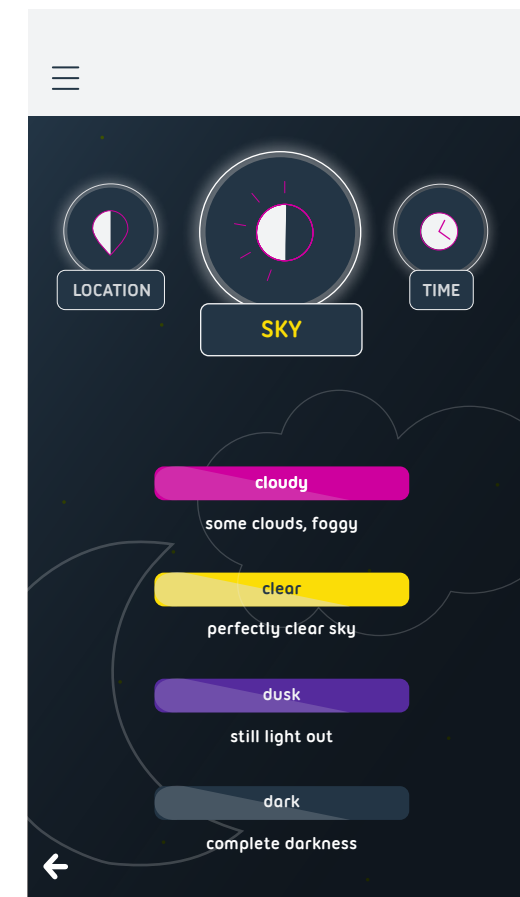

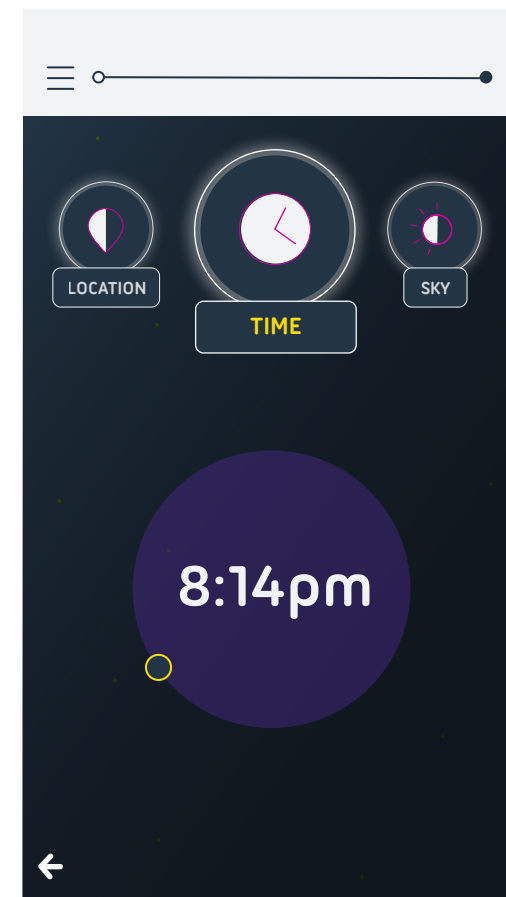

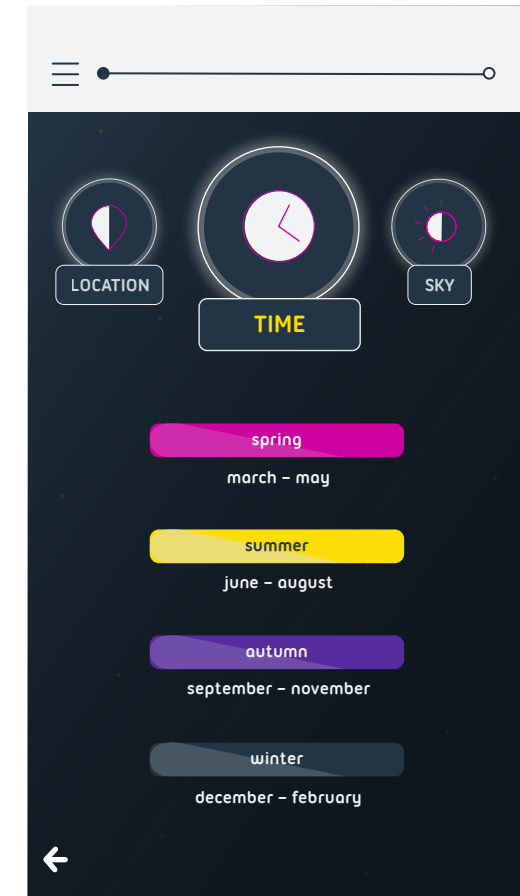

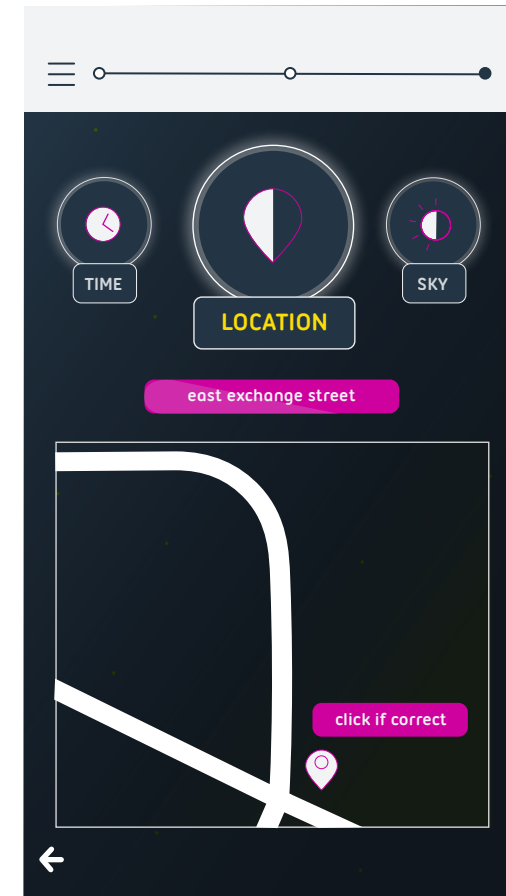

Click this button for the navigation to appear and disappear.

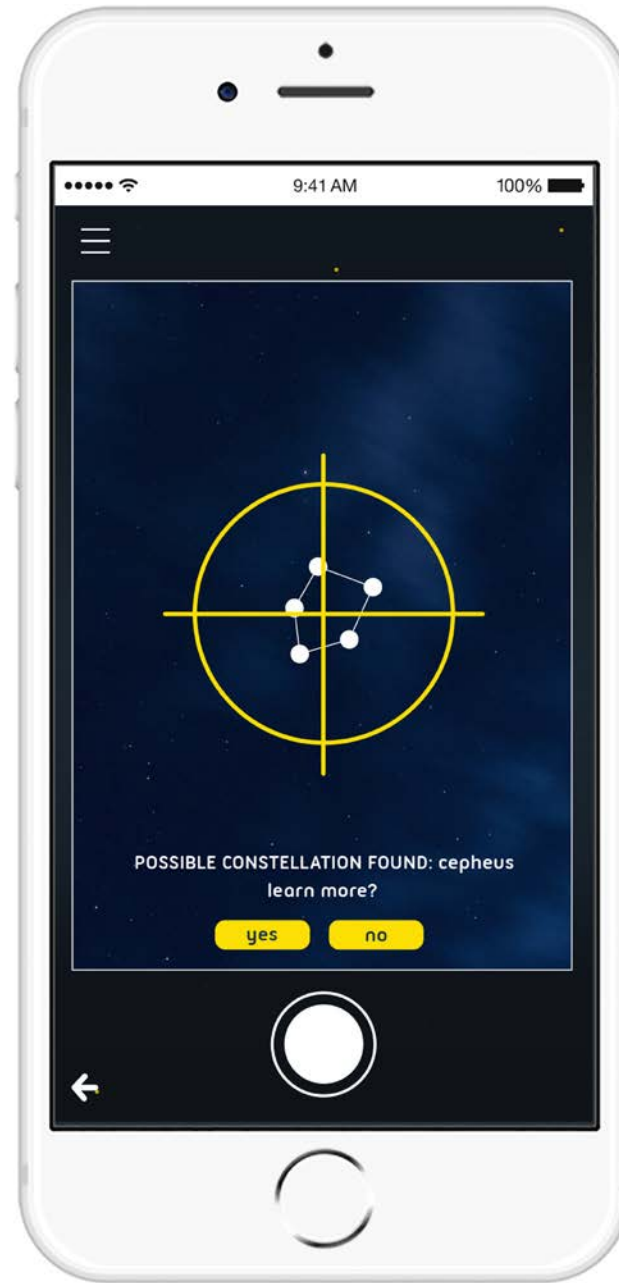

Upon entering the SkyView page, users are prompted to answer various questions.

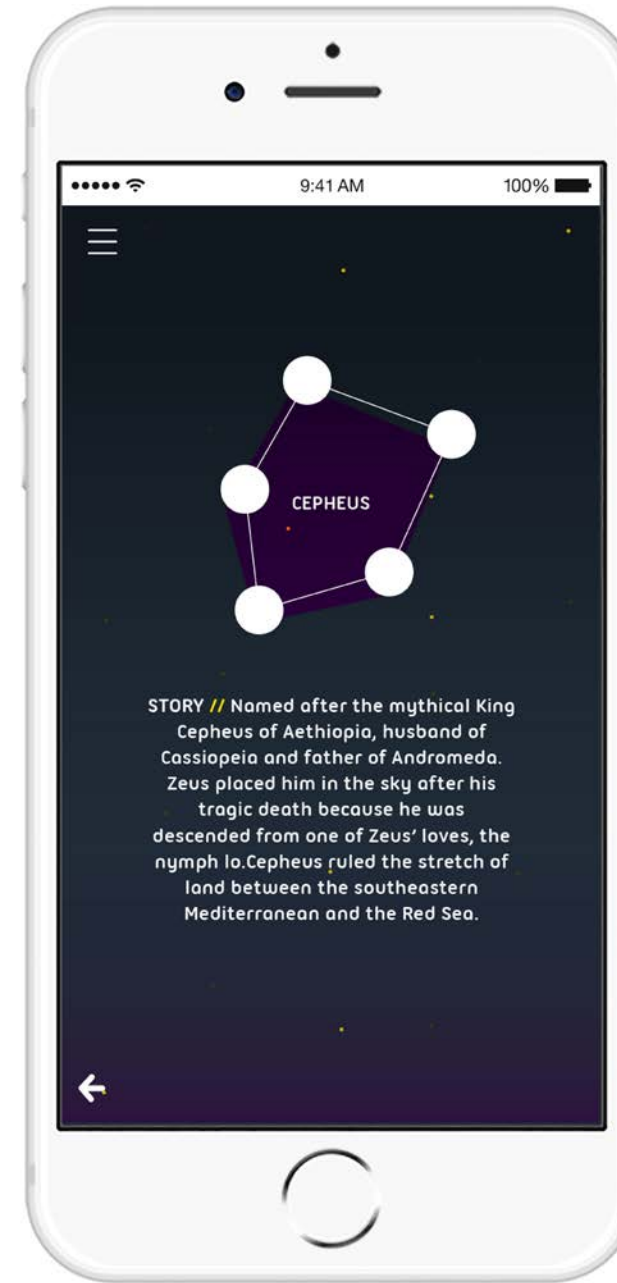

Using the SkyView portion of the app, users are able to point their phone to the sky.

Once the phone detects the stars, it outlines the constellation as seen above — giving the user the option to learn more.

Zoom in to learn about the constellations in a world view.

Once close enough, the names of the constellations will appear — hold on a constellation and information will appear.
